

Technological connection to the electrical networks of the Kemerovo region

Technological connection to electric networks of the Kemerovo region - Kuzbass

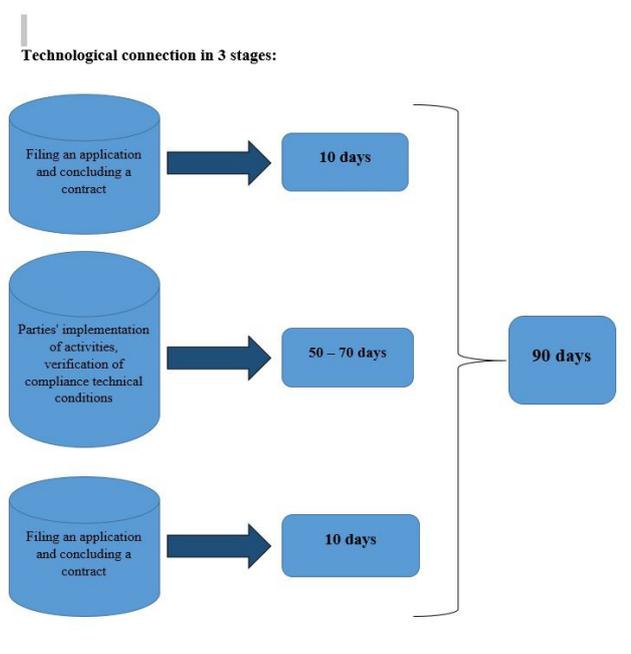

Technological connection is a procedure for connecting a consumer's power receiving devices (power plants) to the electric networks of a network organization.

The procedure is necessary for legal entities and individuals who want to get the opportunity to supply energy: newly constructed facilities; objects already connected to the electric network, but in need of increased power consumption, as well as objects previously connected, in respect of which the reliability category is changing, types of production activities that do not entail a revision of the connected power, but change the external power supply scheme of such power receiving devices.

Memo about the process of technological connection (hereinafter - TP).

The process of technological connection is regulated by the Rules of technological connection of power receiving devices (power plants) of legal entities and individuals to electric networks, approved by Decree of the Government of the Russian Federation of December 27, 2004 No. 861 (hereinafter - the Connection Rules).

Technological connection is carried out on the basis of an agreement that is concluded between the network organization and a legal or natural person, within the terms established for technological connection. The conclusion of the contract is mandatory for the network organization. In case of unreasonable refusal or evasion of the network organization from concluding the contract, the interested person is entitled to apply to the court with a claim for coercion to conclude the contract and recover damages caused by unjustified refusal or evasion.

More detailed information on TP is available on the websites of network organizations.
