

Construction procedures calculator

The construction procedure calculator is an interactive information-analytical service that demonstrates the sequence of procedures depending on the type, type and characteristics of the construction project.

In order to increase the level of informatization of the construction industry of the Kemerovo region - Kuzbass, the procedure calculator operates on the official portal of the regional geographic information system of territorial planning of the Kemerovo region (isogd42.ru).

Using the calculator, the developer can obtain information on the number of construction procedures taking into account the parameters of the facility, the need to prepare documentation for the planning of the territory, the procedure for providing a land plot for construction, the implementation of additional procedures, the connection to engineering networks, the need to obtain permits for conditionally permitted use, deviation from the limit parameters of permitted construction, reconstruction of capital construction facilities, as well as the timing of such procedures for each municipality of the Kemerovo region - Kuzbass.
