

# National Rating

The purpose of the rating is to evaluate the key factors in creating a favorable investment climate - the effectiveness of the efforts of regional authorities to improve the investment climate in the region..

Since November 2014, the Agency for Strategic Initiatives, together with leading business associations, has been forming a full-scale deployment of the National Rating of the investment climate in the constituent entities of the Russian Federation throughout the country.

The rating methodology includes 45 indicators in four areas: "Regulatory Environment", "Institutions for Business", "Infrastructure and Resources", "Support for Small Business".

The rating evaluates the efforts of the authorities at all levels in the regions to create favorable conditions for doing business. The main part of the indicators is formed on the basis of surveys of regional entrepreneurs. A total of 400 thousand respondents were interviewed.

Based on the results of the National Rating in 2014 and 2015, the best practices of work of regional authorities with entrepreneurs to optimize existing regulations and procedures for the provision of public services were identified. These practices form the basis of the educational program, which was developed by the Agency for Strategic Initiatives in conjunction with the Russian Academy of National Economy and Public Administration under the President of the Russian Federation.

## RATING TASKS

- Assess the state of the investment climate, including the results of the implementation of the main instruments of the state policy and the work of regional authorities in the field of its improvement. These instruments include federal and regional regulations, road maps of the National Entrepreneurship Initiative, the Regional Investment Standard, as well as the measures aimed at improving the investment climate.
- To identify the best practices - these are the actions of regional authorities that allow achieving the best results in the development of the investment climate. The rating should make it possible not only to identify the regions carrying these practices. The analytical report on the results of the Rating should contain a description of the most effective actions of the regional authorities and recommendations for scaling them up to other constituent entities of the Russian Federation.
- To motivate regional authorities to take effective measures to improve the investment climate in the constituent entity of the Russian Federation using best practices.

## MATERIALS

On the creation of a working group ("project office") to implement the best practices of the National rating of the investment climate in the constituent entities of the Russian Federation and the implementation of target models to improve the investment climate in the Kemerovo region
