

# Tax burden calculator

The Federal Tax Service has launched a new electronic service, Tax Calculator for Calculation of the Tax Burden.

With its help, organizations that apply the general taxation regime will be able to compare their tax burden, including for certain types of taxes, with industry average values by region.

The tax burden calculator compares the level of tax burden of an organization with the average for taxpayers who work in the same region and are engaged in the same type of activity.

An independent risk assessment will help the taxpayer take measures to eliminate tax risks.
